

## SEAWALL APPLICATION

### NOTES:

1. Terrastop™ seawall may be built vertical in applications which do not require wildlife access.
2. Breakwater angle may be varied per wave energy dispersion requirement.
3. Minimum safety factors to be used for final design should be: 1.5 for tension, 1.5 for external sliding and 2.0 for overturning.
4. Optional foundation mattress only required for soft base conditions.
